

Bulletin #2008-004 1 – February - 2008

Subject:
Fuel lines

Overview:
Effective immediately, replace Article 5.7.C with the following:

- C. Fuel pumps and filters shall also be isolated from the driver/co-driver by a metal bulkhead or the fuel cell case. Any nonstandard fuel line located in the passenger compartment shall be made of metal or metal braided construction, with self-sealing threads at all connections, or comply with FIA Appendix J Article 253.3.

Rationale:
FIA rules allow fuel lines that meet certain specifications, including Kevlar-covered nylon lines, to pass through the passenger compartment. This rule change permits the use of such fuel lines in Rally America events as well.

Questions regarding this bulletin received by Rally America from licensed Drivers and Co-Drivers will be answered in writing.
